Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Complete genome sequence and comparative analysis of the industrial microorganism Streptomyces avermithis.";

Nat. Biotechnol. 21:226-531(2003).

-!- FUNCTION: The glycine cleavage system catalyzes the degradation of glycine (By similarity).

-!- CATALYTIC ACTIVITY: (6S)-tetrahydrofolate + S-
aminomethyldihydrolipoy/brotein = (6R)-5,10-
methylenetetrahydrofolate + NH(3) + dihydrolipoylprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -!- SUBUNIT: The glycine cleavage system is composed of four proteins: P, T, L and H (By similarity).
-!- SIMILARITY: Belongs to the gcvT family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Biochem. Biophys. Res. Commun. 165:1337-1344(1989).

-!- CATALYTIC ACTIVITY: ATP + 3-phospho-D-glycerate = ADP + 3-phospho-D-glyceroyl phosphate.

-!- PATHWAY: Second phase of glycolysis; second step.
-!- SUBUNIT: Monomer.
-!- SUBUNIT: Belongs to the phosphoglycerate kinase family.
                               Biochem. Genet. 28:299-299(1990).

-!- CATALYTIC ACTIVITY: ATP + 3-phospho-D-glycerate = ADP + 3-phospho-D-glyceroy1 phosphate.

-!- PATHWAY: Second dass of glycolysis; second step.

-!- SUBUNIT: Monomer (By similarity).

-!- SUBUNIT: Belongs to the phosphoglycerate kinase family.
                                                                                                                                                                                                                                                                                                1; Length 416;

Wholecular abnormality of phosphoglycerate kinase-Uppsala associated
with chronic nonspherocytic hemolytic anemia.";
Fuc. Natl. Acad. Sci. U.S. A. 77:5461-5465[1980].

L. FUNCTION: In addition to its role as a glycolytic enzyme, it seems that PGK-1 acts as a polymerase alpha cofactor protein
C. --- CATALYTIC ACTIVITY: ATP + 3-phospho-D-glycerate = ADP + 3-phospho-D-glyceroyl phosphate.
C. --- PATHWAY: Second phase of glycolysis; second step.
C. --- PATHWAY: Second phase of glycolysis; second step.
C. --- DISEASE: Defects in PGKL are generally associated with chronic hemolytic anemia [MIM:311800]; although it can be accompanied by either mental retardation or muscular disease (rhabdomyolysis).
C. --- SIMILARITY: Belongs to the phosphoglycerate kinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

-!- SUBCELLULAR LOCATION: Type II membrane protein. Golgi (Potential).
-!- SIMILARITY: Belongs to the glycosyltransferase family 15.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CYTOPLASMIC (POTENTIAL) .
SIGNAL-ANCHOR (TYPE-II MEMBRANE PROTEIN) (POTENTIAL) .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                           "Molecular analysis of CaMntlp, a mannosyl transferase important for adhesion and virulence of Candida albicans.";
Proc. Natl. Acad. Sci. U.S.A. 95:7670-7675(1998).
-!- FUNCTION: REQUIRED FOR THE ATTACHMENT OF THE THIRD MANNOSE
RESIDUE OF O-LINKED SACCHARIDES (BY SIMILARITY).
-!- CATALYTIC ACTIVITY: Transfers an alpha-D-mannosyl residue from GDP-mannose into lipid-linked oligosaccharide, forming an alpha-
1,2-D-mannosyl-D-mannose linkage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Saccharomyces cerevisiae (Baker's yeast).

   mRNAs by estradiol in the immature rat uterus.";
DNA 7:347-354(1988).
-!- FUNCTION: Collagen type III occurs in most soft connective tissues
along with type I collagen.
-!- SUBUNIT: Trimers of identical alpha 1(III) chains. The chains are
linked to each other by interchain disulfide bonds. Trimers are
also cross-linked via hydroxylysines.
-!- PTM: Prolines at the third position of the tripeptide repeating
-unit (G-X-Y) are hydroxylated in some or all of the chains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ProDom; PD000007; Clg_helix; I.

Assay for detecting cross-linked telopeptide analytes indicative of type II collagen resorption in vivo in a body fluid sample, comprises contacting the sample with an antibody which binds to the analyte.

Disclosure; Page 15; 34pp; English.

The invention relates to immunoassays for measuring type II collagen (cartilage) resorption in vivo. The method of analysing a body fluid sample for the presence of an analyte indicative of a physiological condition, involves contacting the body fluid sample with an antibody (Ab) which binds to the analyte, detecting binding of Ab in the body fluid sample, and correlating any detected binding to the physiological condition. The analysis is useful for measuring type II collagen (cartilage) resorption in vivo, for distinguishing between resorption of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to immunoassays for measuring type II collagen cartilage) resorption in vivo. The method of analysing a body fluid sample for the presence of an analyte indicative of a physiological condition, involves contacting the body fluid sample with an antibody (Ab) which binds to the analyte, detecting binding of Ab in the body fluid sample, and correlating any detected binding to the physiological condition. The analysis is useful for measuring type II collagen (cartilage) resorption in vivo, for distinguishing between resorption of cartilage resorption in vivo. The present sequence represents a linear synthetic peptide based on the carboxy-terminal telopeptide sequence of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to immunoassays for measuring type II collagen (cartilage) resorption in vivo. The method of analysing a body fluid sample for the presence of an analyte indicative of a physiological condition, involves contacting the body fluid sample with an antibody (Ab) which binds to the analyte, detecting binding of Ab in the body fluid sample, and correlating any detected binding to the physiological condition. The analysis is useful for measuring type II collagen non-mineralized and mineralized cartilage, and for measuring total non-mineralized and mineralized cartilage, and for measuring total synthetic peptide based on the carboxy-terminal telopeptide sequence of human collagen type III
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Assay for detecting cross-linked telopeptide analytes indicative of type II collagen resorption in vivo in a body fluid sample, comprises contacting the sample with an antibody which binds to the analyte.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .

                                                                                                                                                                                                                                                                                                                             say for detecting cross-linked telopeptide analytes indicative of type collagen resorption in vivo in a body fluid sample, comprises ntacting the sample with an antibody which binds to the analyte.
                                                                                                                                                                                                                                                                                                                                                                                                (cartilage) resorption in vivo. The method of analysing a body fluid sample for the presence of an analyte indicative of a physiological condition, involves contacting the body fluid sample with an antibody fluid sample, and correlating any detecting binding of Ab in the body fluid sample, and correlating any detected binding to the physiological condition. The analysis is useful for measuring type II collagen (cartilage) resorption in vivo, for distinguishing between resorption of non-mineralized and mineralized cartilage, and for measuring total cartilage resorption in vivo. The present sequence represents a linear synthetic peptide based on the carboxy-terminal telopeptide sequence of

The method is useful for diagnosis or monitoring and treatment of diseases associated with an altered rate of biosynthesis/breakdown of an isotopically labelled precursor molecule, specifically osteoporosis; left-ventricular hypertrophy; liver cirhosis or fibrosis; congestive heart failure; scleroderma; coal-miner's pneumoconiosis; cardiac or lung fibrosis; Alzheimer's disease, multiple sclerosis; rheumatoid arthritis; diabetes mellitus; muscle-wasting syndromes; mesular dystrophy; athletic gene or protein targets, phenotypic/human validation studies on potential drugs, drug mechanism studies and determining the risk of developing the disease. The present sequence is human C-terminal telopeptide alpha 1. This sequence is used to illustrate the method of the invention
   fibrosis; mellitus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Determining rate of biosynthesis or breakdown of inaccessible biological molecules, useful e.g. for diagnosis or monitoring treatment, by administering labeled precursor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Alphal(III)collagen; human; pro-collagen; pro-peptide; artificial skin; proteolytic cleavage site; tissue; biocompatible material; cell culture; suture; haemostatic sponge; tissue augmentation.
liver cirrhosis; congestive heart failure; multiple sclerosis; fibrosi coal-miner's pneumoconiosis; muscle-wasting syndrome; diabetes mellitu rheumatoid arthritis; Alzheimer's disease; muscular dystrophy; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .

AAR92061-R92069 represent N-terminal and C-terminal peptides of the recombinant human collagen polypeptides of the invention. This sequence represents the C-terminal peptide of a recombinant human alpha1(III) collagen of the invention. The recombinant pro-collagen of the invention recombinant pro-collagen of the invention comprises a natural collagen polypeptide chain, a pro-peptide, and a non-natural site-specific proteolytic agent recognition site between the collagen and pro-peptide. The recombinant pro-collagens are used to produce collagens which can be used in tissue and cell cultures. The collagens can also be used as biocompatible materials such as arrificial skin, sutures, haemostatic sponges or tissue augmentation compositions for use in humans. The pro-peptide increases the yield of secreted pro-collagen. The increase in yield of the pro-collagen, as compared to cells expressing the collagen chains alone, is at least 1000%
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Recombinant production of collagen - by expressing a pro-peptide-collagen sequence and cleaving at an intermediate proteolytic recognition site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      100.0%; Score 42; DB 2; Length 30; 100.0%; Pred. The invention relates to a method of determining the rate of biosynthesis or breakdown of at least one inaccessible biological molecule in a subject. The method is useful for dagnosis or monitoring and treatment of diseases associated with an altered rate of biosynthesis/breakdown of an isotopically labelled precursor molecule, specifically osteoporosis; left-ventricular hypertrophy; liver cirrhosis or fibrosis; congestive heart failure; scleroderma; coal-miner's pneumoconiosis; congestive fibrosis; Alzheimer's disease; multiple sclerodis; rheumatoid arthritis; diabetes mellitus; muscle-wasting syndromes; muscular dystrophy; athletic training and cancer. The method is also useful for screening candidate gene or protein targets, phenotypic/human validation studies on potential disease. The present sequence is human collagen type I cross-linked carboxy terminal peptide (ICTP). This sequence is used to illustrate the
                                                                                                                                                   Human; therapy; osteoporosis; left-ventricular hypertrophy; scleroderma; liver cirrhosis; congestive heart fallure; multiple sclerosis; fibrosis; coal-miner's pneumoconfosis; muscle-wasting syndrome; diabetes mellitus; rheumatoid arthritis; Alzheimer's disease; muscular dystrophy; cancer; collagen type I cross-linked carboxy-terminal peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Determining rate of biosynthesis or breakdown of inaccessible biological molecules, useful e.g. for diagnosis or monitoring treatment, by administering labeled precursor.
                                                                                                                 Human collagen type I cross-linked C-terminal peptide, PIIICP(alphal).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0
                                                                                                                                                                                                                                                                                                                                                                                    Diseases such as alcoholic cirrhosis, biliary cirrhosis, hepatitis, schistosomiasis, cardiac fibrosis, Crohn's disease, diabetic nephropathy and fibroses caused by surgery result from an inappropriate production of collagen fibrils. Collagen III distribent as a preproprotein which is modified by post-translation modification. The mature collagen III fibrils are generated by cleavage of a propeptide from the C-terminus followed by cleavage of a fragment from the N-terminus. This sequence corresponds to the procollagen III C-terminal propeptide (FILICP). As the fibrils are formed the PIIICP propeptide is released into the surrounding tissue fluids. The invention relates to an immunoassay to determine PIIICP concentrations and thus diagnose the above diseases and others which result from inappropriate collagen deposition. Different fibrotic diseases may show different levels of PIIICP in the serum so the
                                                                                                                                                                                                                                                                                                            New immunoassay for procollagen-III-C-terminal propeptide (PIIICP) useful for diagnosing diseases such as alcoholic cirrhosis, hepatitis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            immunoassay may also be used to determine which disease a particular patient is suffering from. The new immunoassay may also be used to measure the rate of collagen synthesis in patients being treated with glucocorticosteroids. In addition the new antibodies may be used in immunohistochemical staining of cryostat and paraffin sections to assess collagen synthesis in tissue samples from patients suspected of having

The invention relates to a complex between two interacting proceins in adipocyte cells, given in the specification. The proteins are identified by selecteding a bait protein from a known adipocyte marker and then performing a yeast 2-hybrid selection to isolate prey proteins encoded by conforming a nadipocyte cDNA library. The proceins are designated SID (RTM) (selected interacting demains) proteins. Also included are a complucation of the interacting demains) proteins. Also included are a complucation of the adipocyte cells, a recombinant host cell expressing at least one of the interacting proteins as ID (RTM) polypeptide comprising amy of the 738 amino acid cells, a SID (RTM) polypeptide comprising any of the 738 amino acid sequences given in the specification (including its fragment or variant), a vector comprising the specification (including its fragment or variant), a vector comprising the vector, a protein chip comprising the polypeptides and a recombinant host cell comprising the vector, a protein chip comprising the polypeptides, polynucleotides and compounds are useful for preventing or treating metabolic disorders such as obesity or diabetes. The polynucleotides and subscribed comprising the presenting selected interaction, thus complex, polypeptides, polynucleotides are useful for graventing the therapeutic effect. The present sequence represents a SID (RTM)) for screening drugs that modulate the protein interaction, thus conventing the herapeutic effect. The present sequence represents a SID (RTM) convention of the invariance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New complex between two interacting proteins in adipocyte cells, useful for identifying selected interacting domains that modulate protein interactions, or for preventing or treating metabolic disorders such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; oxidoreductase enzyme; transferase; hydrolase; lyase; isomerase;

The present invention relates to the isolation of novel human enzyme polypeptides, and the cDNA (AAS40785-AAS41684) and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of diagnosis, treatment, prevention and/or prognosis of a wide range of disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. ALDS) autoimmune disorders (e.g. athritis), neurological disorders (e.g. AlDs) autoimmune disorders (e.g. athritis), cardiovascular disorders (e.g. athreoselenosis), blood-related disorders (e.g. haemophila), reproductive disorders (e.g. infertility) and infectious disorders (e.g. infertility) and infectious disorders (e.g. infertility) and infectious disorders (e.g. infertility) and convention can also be used in gene therapy. AAU22315-AAU23814 represent the novel human enzyme polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but for infertility was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                       Novel polypeptides and polynucleotides useful for diagnosing, preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous diseases.
                                                                                                                                                                                                                                                                                                                                                                                                            Claim 11; SEQ ID NO 1671; 1180pp; English

```
The invention relates to isolated ovarian related polypeptide (ovarian antigan) comprising a sequence at least 90% identical to a sequence antigan) comprising a sequence at least 90% identical to a sequence selected from a polypeptide fragment, domain, epitope or full length protein of a sequence (S1) appearing as ABG60236 having to related a sequence (S1) appearing as ABG60236 having to relate the cDNA clones encoding the proteins of S1. S1, antibody and the cDNA clones encoding the proteins of S1. S1, reating or ameliorating a medical condition in mammalian subject especially diseases and/or discorders of the ovary and/or breast such as noteinable still diseases (e.g., mastitis, ophoritis), inflammation discorders (such as ovarian Krukenberg tumour and cancer), infectious diseases (e.g., mastitis, ophoritis), inflammatory diseases.

CC discorders (systemic lupus erythematosus, rheumatoid autoimmune disorders (strickle cell anaemia), autoimmune disorders (strickle cell anaemia), arthritis), blood-related disorders (strickle cell anaemia), arthritis), alload-related disorders (strickle cell anaemia), arthritis), anusculoskeletal system disorders (arthrithammatory disorders (Addison's disease) and partineory disorders (Addison's disease) and partineory disorders (Addison's disease), astrointestinal disorders (inflammatory disorders), liver disorders (inflammatory disorders), liver disorders, disorders and wound healing and epithelial cell proliferation. They are also useful to prevent kin aging, for preventing hir loss, to maintain organs conditive or preservative. The present sequence data for comparted and mammalian metabolism, to change a mammal's mental or physical state, and and an epithelial cell proliferation. Note: The sequence data for this patent did not form part of the printed specification, but was conditionally and

The invention relates to a complex between two interacting proceins in adipocyte cells, given in the specification. The proteins are identified by selecting a bait protein from a known adipocyte marker and then competitive a bait protein from a known adipocyte marker and then performing a yeast 2-hybrid selection to isolate prey proteins encoded by compense of an adipocyte cDNA library. The proteins are designated SID (RTM) (selected interacting domains) proteins. Also included are a compluant host cell expressing at least one of the interacting recombinant host cell expressing at least one of the interacting cells, a recombinant host cells expressing any of the 738 amino acid sequences given in the specification (including its fragment or variant), a singly polymucleotide comprising any of the 738 nucleotide sequences given in the specification (including its fragment or variant), a vector comprising the SID (RTM) polymucleotide, a recombinant host cell comprising the Sucception comprising the protein chip comprising the polymeptides and a recombinant host cell comprising and compounds are useful for preventing or treating metabolic disorders such as obesity or diabetes. The complex, polymeledices, polymucleotides and compounds are useful for preventing or treating metabolic disorders such as obesity or diabetes. The polymolectides are useful as probes or primers. The complex is particularly useful for identifying selected interaction, thus certains the therapeutic effect. The present sequence represents a SID (recombined) to the presents as ID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New complex between two interacting proteins in adipocyte cells, useful for identifying selected interacting domains that modulate protein interactions, or for preventing or treating metabolic disorders such as obesity or diabetes.
                                                                                     Human; prey, adipocyte, SID; selected interacting domain; anorectic;
antidiabetic; protein-protein interaction; diabetes;
yeast 2-hybrid assay; metabolic disorder; obesity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

This sequence represents a chimeric procollagen molecule of the invention. This sequence has the procollagen C-prepropeptide from the procollagen C-prepropeptide from the propagation attached to the pro-alphal(III) chain sequence. The C-propeptide is implicated in the assembly of the monomer chains into trimerised pro-alpha chains prior to cleavage of the N- and C-propeptides and formation of collagen in fibril-forming procalpha chains. The C-propeptides determine the type-specific assembly of the moieties to which they are attached. The molecule of the invention comprises a first moiety which is an alien collagen clivity attached to a second moiety, which is an alien collagen alpha-chain or a non-collagen material. The novel collagen molecule can be used for treatment or diagnosis in humans cor animals, especially for the treatment of procollagen suicide, as an adhesive or implant, to promote (chronic) wound healing or fibrotic diseases with reduced scarring or for use in photography, brewing, containing substitutions in the recognition site, may have significantly altered properties and characteristics, such as different binding the containing substitutions in the recognition as different binding caltered properties and characteristics, such as different binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel pro:collagen mol. - comprising pro:collagen C-pro:peptide attached to an alien collagen alpha-chain or non-collagen material, useful e.g.
                                                                                  C-propeptide; recognition sequence; procollagen; monomer chain; therapy; trimerised pro-alpha chain; fibril; procollagen suicide; wound healing; fibrotic disease; human; chimeric protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;
